The Certification Program of the *National Association of Speed and Explosion* (NASE INC, formed in 1998) has *Institutional accreditation* as part of the curriculum in University programs. This educational process involves affiliation programs in university undergraduate and graduate courses that are fully accredited by the institution to meet all academic standards of excellence. The NASE Certification Program is also accredited through the *Canadian Personal Training Network (CPTN)*. These two accreditations ensure that the certification program meets standards of excellence for best practice in determining what is appropriate for professionals in the field.

Due to the specificity and size of the Association, the NASE is not eligible for accreditation through the National Commission for Certifying Agencies (NCCA). The NASE certification deals entirely with the improvement of speed for sports competition rather than with an all-encompassing content-based curriculum. It provides a specific certification that is a supplement to, not a replacement for, NCCA recognized certifications.
